# INTRODUCING WATCHOUT 5

Dataton WATCHOUT production and playback software offers more than huge, high resolution, soft-edge images across multiple screens. It gives you geometry correction, for creating visual backdrops on curved or irregular projection surfaces. It gives you the power to unite stills, video, live footage, animations, sound and graphics on an array of screens, side by side, scattered or stacked. It gives you stereoscopic playback and 3D effects for shows that really stand out. It gives you live data feeds streamed into your show and external control of show media and effects.

The potential is all there, just waiting.

Now it's up to you to create a sensation.

## KENNEDY SPACE CENTER, ORLANDO

'Exploration Space: Explorers Wanted' is a recent addition to NASA's Kennedy Space Center Visitor Complex. This immersive exhibit gallery features large-scale digital projections sourced from Dataton WATCHOUT on center, circular and trapezoidal screens, and as part of a live hosted show.

## COMMONWEALTH GAMES 2010, DELHI

The centerpiece of both the opening and closing ceremonies at the 2010 Commonwealth Games was a huge helium balloon, rising from the center of the 60 000 seater stadium. The 360 degree projection surface on its underbelly was covered in imagery from a 16-channel WATCHOUT system.

## CENTENARY CELEBRATIONS, LISABON

To celebrate the 100th anniversary of the republic, a stunning historical show was projected on the 145 by 55 m building facade in the Praça do Comércio square in Lisbon. The WATCHOUT show covered the entire front of the building with seamless geometry corrected images.

## 3D/STEREOSCOPY

WATCHOUT 5 brings new 3D capabilities into show production. Position and rotate all media objects in 3D space with motion paths, then show it off with stereoscopic projection, including 3D video playback. Stereoscopic images can be freely positioned on areas of a screen or surface for maximum creative impact.

## MULTIPLE DISPLAYS

WATCHOUT is all about multiple displays, putting images on numerous screens or display areas and making them work together. Version 5 makes multi-display shows even more cost-effective. Now you can drive up to six displays off a single computer using one WATCHOUT license.

## LIVE INTERACTION

WATCHOUT™ version 5 opens up for even more dynamic presentations with live interaction. WATCHOUT understands virtually any kind of device or external system, letting you connect sensors and control sources directly to on-screen elements such as images, video, live feeds and more.
